Manuel Mittler

Research lab – Summer term 2014

University Koblenz-Landau

Open from last meeting

- To collect further ideas on good agent behaviour, take a look at the implementation of the agents provided in the MAPC 2013 download package.

- Will we use a software development methodology like XP or SCRUM?

- Decide on a language to work with.

- sources of earlier contests to find well-performing approaches and strategies.

Open from last meeting

- What team and project name do we want to use?

- Artur proposed Koblenz Multi-Agents KoMA (coma)

- Michael R. proposed Multi-Agents Koblenz MAKo (a shark)

- Miriam proposed AMoK (KoMA backwards)

- ▪

Decisions made

- Look through the implementation of other teams how they realized the planning (Jason).

- Start our implementation on top of the project that Artur set up.

- Strip the code down to the basic functions so that we are able to communicate with the server etc. On top of that we will then add our plans (Jason).

Decisions made

- We will use the provided eis-massim to communicate with the server (API that wrapps xml-messages).

Thanks for your attention!
